

AUTOMATICALLY **DISTRIBUTE** COMPLETED DOCUMENTS

PrintScript for Dragon Medical 360 | eScript

Automatically completed documents

CHALLENGE:

How can we distribute documents to the right people and places, quickly and reliably?

SOLUTION:

PrintScript™ allows healthcare organizations to securely and automatically distribute completed documents to network printers and fax machines.

PrintScript provides automatic, flexible distribution of completed documents to network printers and fax machines at healthcare facilities. Fully integrated with the document creation capabilities of computer aided medical transcription, PrintScript eliminates the need for other vendors' software or manual intervention when distributing documents via print or fax. A single administrative console lets supervisors easily set up, manage and track the entire workflow, from dictation through distribution. From a print and/or fax server at the customer site, PrintScript ensures the smooth, prompt distribution of documents to support patient care.

KEY BENEFITS

- Distribute documents where they are needed
- Flexible distribution templates
- Audit Trail and Distribution Tab
- Streamlined administration
- Fast, reliable, printing and faxing
- Integrated with NetScript™ e-signature
- Easy to implement

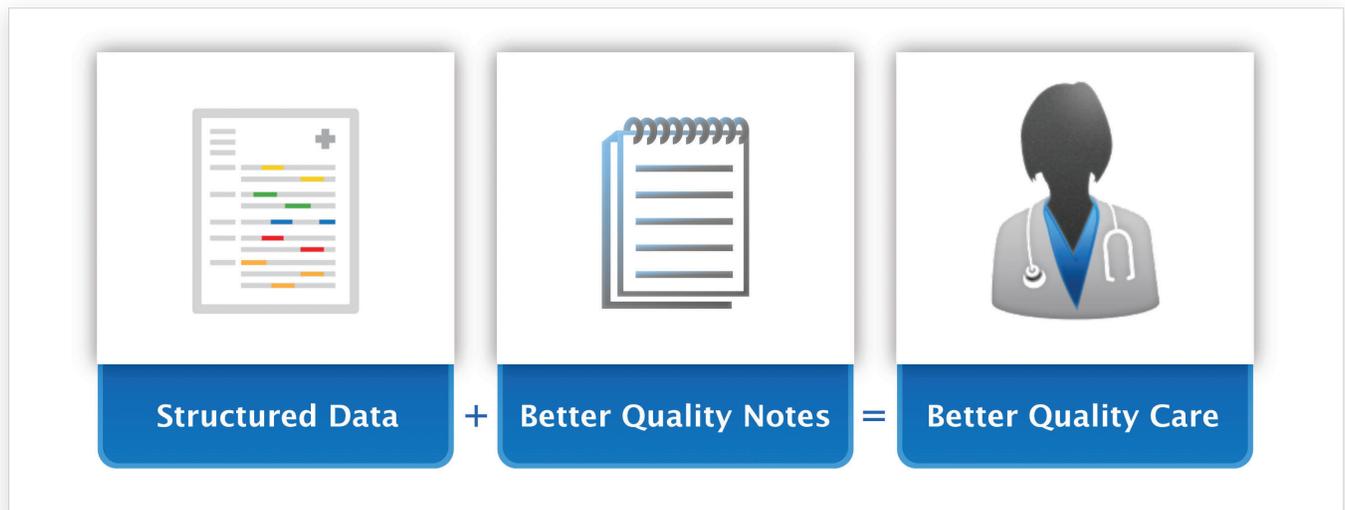

DISTRIBUTE DOCUMENTS WHERE THEY ARE NEEDED

PrintScript provides configurable role-based distribution rules, allowing flexible document distribution to a broad spectrum of recipients; the dictating clinician, the attending physician, or the referring physician are just a few of the roles that can be set up and used on a dictation-specific basis. When documents are completed in EditScript™, they are distributed based on distribution rules and associated clinician preferences. In addition, distribution rules can be configured to send documents directly to the printer on the patient's floor, or to specific locations such as the hospital's medical records department. Distribution can be triggered automatically when documents are completed, ensuring they arrive where they need to be in the shortest amount of time. Documents can also be distributed "on-demand" by administrators or clerks.

FLEXIBLE DISTRIBUTION TEMPLATES

Print and fax templates keep documents consistently formatted and easy to read, and PrintScript keeps templates easy to administer. PrintScript makes use of the 'business entity' concept within EditScript that enables an organization to define certain departments, clinics, specialty centers, or hospital locations as separate business entities for administering transcription services. Through the power of business entities, the Template Manager can reduce the myriad of templates needed in other systems into a few, flexible print templates that may be used across work types, clinicians, departments and facilities. Supervisors use simple Microsoft® Word formatting to add or remove logos, change fonts, or insert specific patient visit content to create attractive, branded, and easy-to-read notes and correspondence. With the Template Manager, users can edit, test, and deploy print template changes quickly and easily, and control printing issues, such as orphan lines and blank pages.

Dragon Medical 360 | eSCRIPTION

AUDIT TRAIL AND DISTRIBUTION TAB

PrintScript rapidly communicates the status of your print and fax jobs to EMon®, the Dragon Medical 360 | eScription administrative console. In the Audit Trail, administrators can see a step-by-step account of the document's history, from dictation until signature. In the same view, the Transmitted table shows a snap-shot of all distributions for that particular document. To drill down to even more detail on print, fax or electronic distributions for single or multiple documents, administrators can use EMon's Distribution Tab.

STREAMLINED ADMINISTRATION

PrintScript, as part of the Dragon Medical 360 | eScription platform, reduces the number of different systems administrators need to manage. PrintScript can be part of a single workflow and a single system that starts at dictation and ends with electronic signature and distribution. It can also access and update the distribution rules, clinician profiles, Template Manager, and Audit Trail from the same EMon system used with EditScript.

FAST, RELIABLE PRINTING AND FAXING

Reduce waiting by having PrintScript process multiple distribution jobs simultaneously. Parallel processing speeds printing and reduces bottlenecks. In addition, PrintScript reduces distribution failures and time-consuming manual retries by automatically logging and retrying failed prints and faxes. Automating retries assures that the flow of work does not get interrupted.

DOCUMENT DISTRIBUTION

INTEGRATED WITH NETSCRIPT E-SIGNATURE

Use NetScript to trigger distributions when documents are electronically signed. NetScript and PrintScript are designed to integrate with each other and can stand side-by-side in the document workflow. In addition, clinicians can use NetScript to add and remove CCs from the distribution list of a document, allowing distribution to be tailored to the requirements of each patient visit.

EASY TO IMPLEMENT

Organizations using EditScript benefit from a simple upgrade process to add document distribution through PrintScript. The same clinician profiles already in use for computer aided medical transcription are easily expanded to support document distribution, eliminating the need for multiple user databases. PrintScript is designed to work with all components of the Dragon Medical 360 | eScription platform, including EMon® and NetScript, creating a single, highly efficient system for document creation and distribution throughout the healthcare enterprise.

ABOUT NUANCE HEALTHCARE

Nuance Healthcare, a division of Nuance Communications, is the market leader in providing clinical understanding solutions that accurately capture and transform the patient story into meaningful, actionable information. These solutions are proven to increase clinician satisfaction and HIT adoption, supporting thousands of hospitals and providers to achieve Meaningful Use of EHR systems and transform to the accountable care model.

To learn more about how Nuance Healthcare can help you improve financial performance, raise the quality of care, and increase clinician satisfaction, please contact us at 888-350-4836 or visit www.nuance.com/healthcare.
